Can match most colors

Options:

The Express NitroSpreader uses a Nitrogen over Oil Accumulator in its fully self-contained hydraulic loading system. It is designed to accept your close-coupled Pin-On Axle to make a Spread Axle. These allow the NitroSpreader to maintain a constant load on your Pin-On Axle over virtually any terrain. The NitroSpreader has the capability of maintaining the load on your Pin-On Axle through over **2 feet** of vertical travel. In addition, the hydraulic system can be used to lift your Pin-On Axle off the ground for backing up.
